Manassantin A Isolated from Saururus chinensis Inhibits 5-Lipoxygenase-Dependent Leukotriene C4 Generation by Blocking Mitogen-Activated Protein Kinase Activation in Mast Cells

About the cover: Effect of fasudil on p65 subunit of NF-κB in thoracic aorta (immunohistochemical stain×400). Thoracic aortas were obtained from the control group, high-cholesterol diet (HCD) group, simvastatin treated group, low-dose fasudil treated group, or high-dose fasudil treated group. Relatively abundant expression of the NF-κB was shown in both endothelial and smooth muscle cells of the HCD rats, and the localization in the nuclei of intimal endothelial cells and medial smooth muscle cells. However, NF-κB expression was not found in the nuclei of vascular cells of control rats. Treatment with simvastatin or fasudil significantly suppressed the expression and localization of NF-κB in nuclei. See the article by Ma et al. on page 1684 of this issue.
